

ABSTRACT

Herein we disclose a composition, comprising (i) a C_n-Ab, wherein C_n is a fullerene or nanotube comprising n carbon atoms and Ab is a moiety comprising an antigen-binding site and is linked to the C_n and (ii) a therapeutic molecule associated with the C_n-Ab, wherein the therapeutic molecule comprises a radioisotope. Also, we disclose a method of treating a disease in a mammal, comprising administering to the mammal an effective amount of the composition.
